

Export Passwords & Bookmarks from Safari

Ensure *Safari* is open.

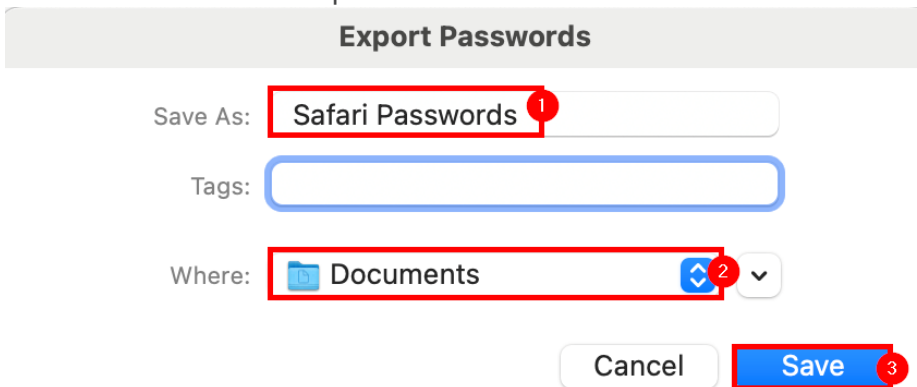

From *Safari*, select the **File** dropdown from the *Menu Bar*, then select **Export**, then select **Passwords...** or **Bookmarks...**

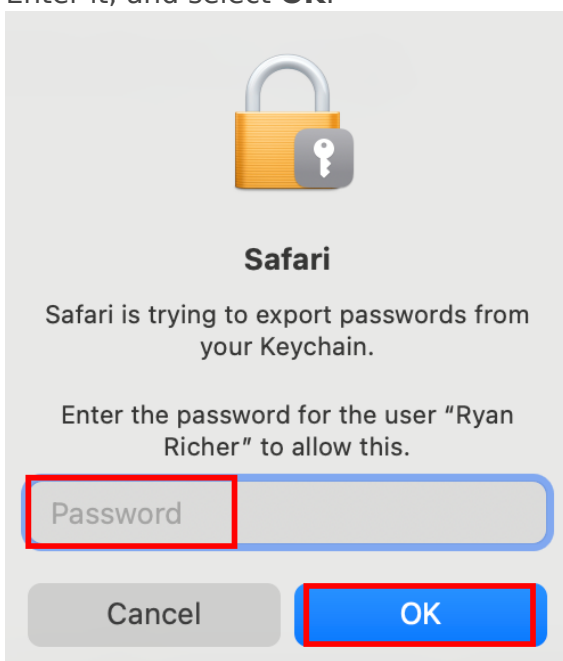

From the confirmation dialogue, select **Export Passwords...** or **Export Bookmarks...**

From the *Export Passwords* or *Export Bookmarks* window, in the *Save As* field enter **Safari Passwords** or **Safari Bookmarks**. In the *Where* field, select **Documents**. Select **Save** when complete.

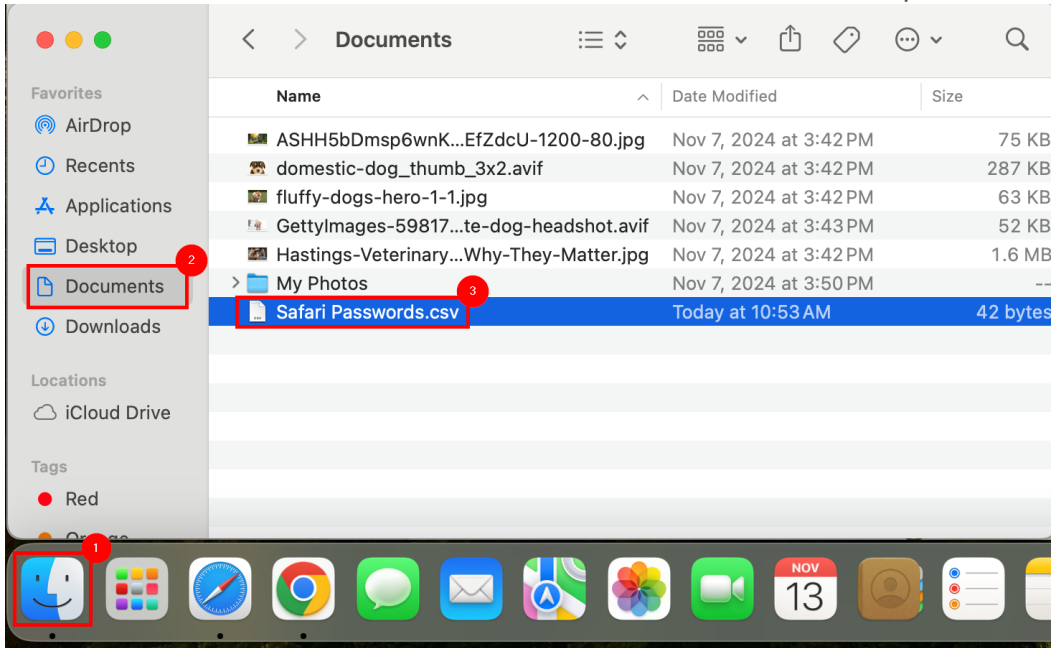

A dialogue window will open requesting your sign-on password. Enter it, and select **OK**.

Safari will export all saved passwords.

To confirm successful export, open **Finder**, and select **Documents** from the left menu pane.

Safari Passwords.csv or **Safari Bookmarks.html** should be present in the list of files.

The Safari Password export is unprotected, and the passwords within are all in plaintext. Once the passwords are re-imported, or referenced, the Safari Password file should be deleted, and the trash emptied.
